- Reduced laundering of *TransferPads*
- Extended *TransferPad* service life

# **SaniLiner**™

## **TransferPad Covers**

AirPal SaniLiners are a very useful accessory to AirPal's line of *TransferPads* for the purposes of enhanced infection control and optimization of the AirPal lateral transfer system.

Made of the same advanced medical fabrics as AirPal *TransferPads*, SaniLiners are easy to clean and launder. Available in Reusable and Disposable versions for all *TransferPad* sizes, SaniLiners have been designed with an extended length/width feature to fully cover the *TransferPad* when inflated. This provides better infection control than competitive designs.

### **Enhanced Infection Control!**

SaniLiners are easily attached to AirPal *TransferPads* with non-ferrous snaps. This method of attachment offers enhanced infection control over Velcro® based systems. Similar to *TransferPads*, the snaps are compatible with MRI environments and the SaniLiners are radiolucent.

### **Optimized *TransferPad* Deployment!**

AirPal SaniLiners provide a quicker *TransferPad* "turn around" between patients, a reduced inventory of *TransferPads* in the cleaning cycle, reduced laundering costs, and an extended *TransferPad* service life. Simply stated, AirPal SaniLiners will help your facility optimize the deployment and use of the AirPal lateral patient transfer system.

Why not call AirPal today for our extremely cost effective SaniLiner pricing?
